

VERSA-CRETE

1/4 to 1/2-Inch Concrete Overlayment System

Versa-Crete is a polymer modified decorative thin stampable overlayment system designed to produce architectural paving finishes similar to conventional stamped concrete. Versa-Crete has very high compressive strength and can be left exposed to commercial traffic. The system consists of a primer, Versa-Crete Polymer Modified Mortar, Integral Color Pack, Stain and Clear Sealer. Overlay stamping mats can be used with the Versa-Crete system with little or no modification to traditional stamping techniques.

The Versa-Crete paving system is typically installed as a 1/4 to 1/2-inch overlayment. Versa-Crete is a very decorative overlayment which looks like stamped concrete, yet functions as a tough and durable floor. It can offer substantial savings over costly tile and slate patterns while maintaining a wide pallet of color options. Versa-Crete is designed to be installed over our waterproof membrane systems to provide a composition waterproof and decorative stamped floor finish.

Features and Advantages:

-  Tough
-  Durable
-  Low Odor
-  Economical
-  Water-Based
-  Abrasion Resistant
-  Fast Setting
-  Great Adhesion to Concrete
-  Looks Like Stamped Concrete
