## 4800 EPOXY

*100% SOLIDS INDUSTRIAL FLOOR COATING*

The 4800 Industrial Floor Epoxy, both the low-yellowing and HD formulations, is a 100% solids industrial epoxy floor coating. The 4800 Epoxy series was explicitly designed for applications that call for high-strength and high-gloss, while being abrasion and chemical resistant. Due to its solvent-free nature, the ultra-low odor allows it to be applied without disabling surrounding operations during application and cure.

The low viscosity of the system allows it to be applied easily by roller, brush, or squeegee from a thin 2 mils to 125 mils (1/8") for resurfacing applications. 4800 Epoxy is also available in a non-yellowing formula that resists yellowing longer than the standard formula. We also offer an HD B component with lower mixed viscosity compared to the standard 4800 B component, allowing for easier application and faster drying time.

### FEATURES & ADVANTAGES:

- 100% solids
- 8 Standard colors
- Low odor
- Low yellowing option
- High gloss
- Good resistance to most chemicals
