5410 URETHANE

WATERBORNE CHEMICAL-RESISTANT URETHANE PIGMENTED FLOOR COATING

5410 Waterborne Chemical Resistant Urethane (CRU) Pigmented Floor Coating exhibits excellent wear and UV stability when installed over concrete floors found in garages or commercial areas. The film build, gloss, and chemical resistance are comparable to solvent-based systems without the intense odor associated with them or the high VOC levels.

This allows the applicator to use the product during normal business hours where customers or neighboring tenants won't be disturbed by an offensive solvent odor, yet not sacrifice any of the physical properties we expect from the urethanes. The 5410 Waterborne CRU Pigmented Floor Coating is a popular urethane topcoat option for decorative concrete applications.

FEATURES & ADVANTAGES

- Low Odor
- Non-Flammable
- Very low VOC content
- Outstanding Chemical Resistance
- Excellent Gloss Retention
- Stain Resistance
- UV Stable
- Non-Yellowing
