5050 Polyurea Concrete Countertop Sealer is a proprietary formula that is designed for speed and Heat Resistance. New developments in Nano-Technology have allowed us to increase the heat resistance of this already Heat Resistant Polyurea. 5050 Polyurea Concrete Countertop Sealer has a potlife up to 45 minutes in real world conditions and it dries in 60-90 minutes after it is applied to concrete. 5050 will provide an extremely wet look to the concrete due to its ability to dive deep into the concrete surface.

Features and Advantages:
- NANO Technology Resists Heat
- Non Yellowing Use Inside or Outside
- Extremely Fast Drying
- Long Pot-Life
- Penetrates Deep Into Porous Concrete
- Provides an extremely “Wet Look”
- Abrasion Resistant
- Will Cure At Temperatures Just Above Freezing

Polytop has additional Nano-Technology additives (very expensive stuff) to improve heat resistance, however this does not affect stain/solvent resistance at all.
