5205 POLYUREA

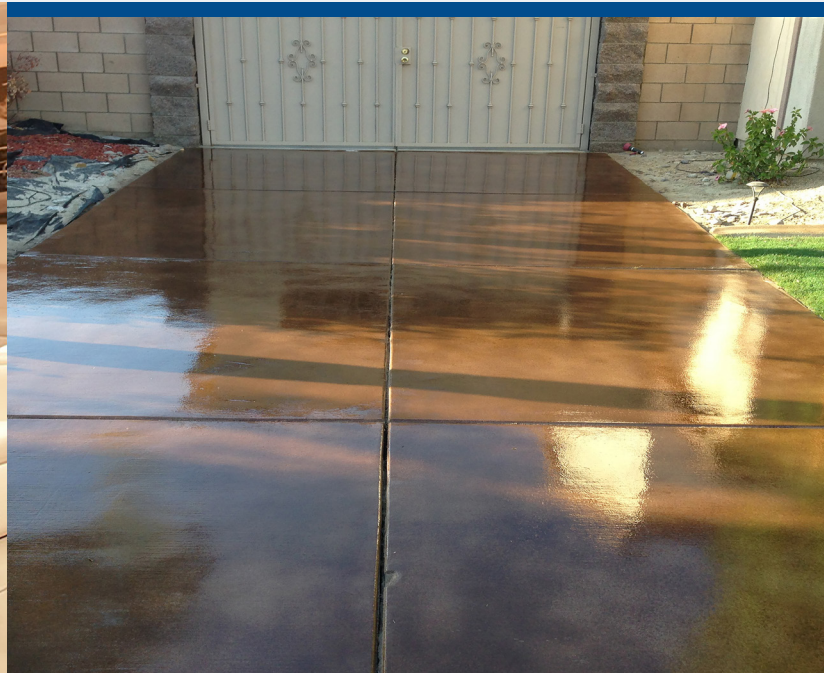

ULTRA FAST DRYING CLEAR COAT

5205 Polyurea Hybrid Ultra Fast Drying Clear Primer/Sealer is designed for use over concrete floors. It is also well suited as the first thin coat over a flaked garage floor as it will allow the applicator to apply the second clear topcoat in 20 minutes, providing a higher build floor with minimal downtime. This unique technology allows for more than an hour of pot life, yet the material dries in as little as 20 minutes when applied to the floor. When used as a clear concrete sealer, 5205 Polyurea has water clarity and a mirror-like finish and gloss. It also has a

lower viscosity that makes it very easy to apply while providing an even longer pot life and a faster cure when applied onto the surface. The cross-linking of the 5205 series film in the cure makes it exceptionally tough and durable, maintaining its gloss far beyond that of comparable systems. Much attention has been given to the application characteristics in its formulation. As a result, 5205 Polyurea is extremely user-friendly without having to sacrifice the performance of the finished product. The applications for this product are almost limitless.

FEATURES & ADVANTAGES

- Medium builds - 66% solids
- 9 g/L VOC
- High-gloss
- Good resistance to most chemicals
- Non-yellowing
- Will cure at temperatures just above freezing
