

Diamond Floor

Metallic Crystal Floor Coating

DIAMOND FLOOR

Diamond Floor is a unique floor coating system that will provide a very brilliant finish in varying colors to concrete floors. Use Diamond Floor when you need a very distinct attractive floor finish that gives your floor "Bling".

The base for Diamond Floor starts with 4100, a vapor blocking high solids epoxy primer. This allows the Diamond Floor to be placed over concrete floors with higher than normal MVE levels. 4100 incorporates a unique technology which causes the material to wick deep into the concrete pours providing adhesion that is 3 times greater than a standard epoxy over a profiled floor.

Diamond Floor can be top coated with any of our popular clear 2 component sealers. The Metallic Crystals in the Diamond Floor System are UV resistant and can be used outside if they are top coated with a non yellowing topcoat. At time of this writing we have 3 two component topcoats that can be used outside without fear of yellowing.

Features and Advantages:

- ☑ Brilliant Appearance that provides "Bling" to your floor
- ☑ Utilizes our 4100 as the basecoat which provides extra resistance to MVE
- ☑ Works with all of our 2k Topcoats

Suitable for Use over:

- ✓ Concrete floors
- ✓ Garage Floors
- ✓ Retail & Showrooms

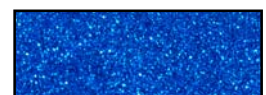

The Metallic Crystals really Sparkle When Light Shines on it.
